

Verite Inc.
Professional CAE company

Declaration of interest in *Code_Aster Open source* and *Salome - Meca*

Verite Inc. Japan offers services in CAE (numerical simulation) in Japanese, English and French :

- Simulation modeling and consulting service,
- Training and seminars,
- Publication of CAE tutorial books,
- Installation and technical support
- Customization (programming)

Now, **Verite Inc's** main activity is the training and calculation service of NASTRAN, but we intend to increase the training and support around *Code_Aster* and *Salome - Meca*.

An illustration of our activities is on the website www.cae-school.com.

Why our company intends to do the activities around *Code_Aster* ?

One thing, we recognized the splendid software of *Code_Aster*. We would like to spread it in Japan. Another is easy access to French language, because I had an experience of working in France (Clermont-Ferrand), for about 4 years

Activities planned with *Code_Aster Open Source* and *Salome - Meca*

Code_Aster is not yet well know in Japan. There are many people who believe the open source is unstable. To dispel the misunderstanding and to succeed the project, we made a plane of the next :

Stage 1: To spread of the presence of this software, we publish tutorial books of Salome-Meca.

Stage 2: To increase users and fans of Code_Aster (Salome-Meca), we hold seminars to train users with Code_Aster (Salome-Meca).

Stage 3: We increase Code_Aster users and support them.

While we continuously repeat these methods, we extend this business plan. We already published a tutorial book of Salome-Meca and will publish second book in September. We started training. Support will be started in November. Now we have some inquiries for support. So, our website www.code-aster.jp and www.salome-meca.jp are under construction now.
