

## ERREU01 - Test of émission of the messages d'error of the routines CALCUL and Summarized

---

### PRERES:

This test CALCUL validates the emission of messages d'error of the routines (elementary computation not programmed) and PRERES (singular matrix).

## 1 Principle of the test

---

This test is a data-processing test. It validates that the routine `CALCUL` transmits a message d'error to say that an elementary computation is not programmed yet (one tries to calculate a loading of rotation with elements for whom it is not planned) and that routine `PRERES` emits a message to say that a matrix is singular (one does not block all the modes of rigid body).
