

ERREU06 - Functional check of Not in *Summarized*

Code_Aster:

This test validates the fact that in version debug on the server centralized Aster4, *Code_Aster* stops in error when one tries to handle Not (Not-a-Number) of type SNaN (Signalling Not).

1 Principle of the test

This test is a data-processing test. It validates that `Not` defines in `envima.c` is well of the `SNaN` type and that, so any handling causes the stop of the execution in "numerical Error". This test is carried out using key word `TEST_NON=' OUI'` of the command `TEST_RESU`.
