

## ERREU09 – Validation of the processing of the exceptions

---

### Summarized:

This test does not have any physical meaning, it is primarily a data-processing test. It is used in particular to check the processing of the exceptions and the concerned mechanisms during a stop CPU

### Modelization a:

- test of the implementation python
- test of the lifting of the exceptions python by *Code\_Aster*

### Modelization b:

- raised of the ArretCPUError exception in STAT\_NON\_LINE

### Modelization C:

- raised ArretCPUError exception in DYNA\_VIBRA (BASE\_CALCUL=' GENE')

This documentation is voluntarily brief.
