

ERREU14 - Test of emission of the error messages for the command variables

Summarized:

This test validates the emission of the error messages related to a bad use of the command variables.

1 Principle of the test

This test is a data-processing test. It validates that a bad use of the command variables leads to a comprehensible error message by the user.

3 "errors" are tested for `AFFE_MATERIAU/AFFE_VARC` :

- The user affects a field but the components of field have an incorrect name.
- The user does not affect the command variables on all the elements which need some.
- The user affects a field but this field does not relate to all the elements by needing some.
