

ERREU09 – Validation of the treatment of the exceptions

Summary:

This test does not have any physical meaning, it is primarily a data-processing test. It is used in particular to check the treatments of the exceptions and the mechanisms concerned at the time of a stop CPU.

Modeling a:

- test of the implementation python
- test of the lifting of the exceptions python by *Code_Aster*

Modeling b:

- lifting of the ArretCPUError exception in STAT_NON_LINE

Modeling C:

- lifting of the NonConvergenceError exception in SIMU_POINT_MAT (SUPPORT=' POINT')

This documentation is voluntarily brief.
